Ruobing Han

Email: hanruobing@google.com Homepage: https://drcut.github.io/

Education

Georgia Institute of Technology (GT), USA 2021.5 – 2025.5
PhD in Computer Science (CS)
Research Areas: Compiler, Hardware
Advisor: Dr. Hyesoon Kim

Georgia Institute of Technology (GT), USA 2021.5 – 2024.12
MS in Computer Science (CS)
Major concentration: Machine Learning

Peking University (PKU), China 2014.9 – 2018.7
Bachelor of Science, Computer Science and Technology

Work Experience

Google Mountain View, CA, USA

Title: Software Engineer III

Dates: 2025.5 – Present

Georgia Institute of Technology Atlanta, GA, USA

Title: Graduate Research Assistant

Dates: 2021.5 – 2025.5

Google Sunnyvale, CA, USA

Title: Software Engineering Intern

- **TPU Performance team** (2024.5 – 2024.7)
- **ML Functional Debugging team** (2023.5 – 2023.7)
- **LLVM Core team** (2022.5 – 2022.8)

Research

Supporting CUDA on non-NVIDIA Devices

- Build a framework to execute unmodified CUDA source code on CPUs (x86, ARM, and RISC-V) and non-NVIDIA GPUs.
- The related papers are published in IEEE/ACM International Symposium on Microarchitecture (MICRO), ACM Transactions on Architecture and Code Optimization (TACO), ACM Transactions on Design Automation of Electronic Systems (TODAES), and IEEE Annual International Symposium on Field-Programmable Custom Computing Machines (FCCM).
- Project link: `https://github.com/cupbop/CuPBoP`

Improving C++ Incremental Build Execution Time

- Enhance the performance of the incremental build process by recording previous compilation results.
- Develop and implement a proof-of-concept model in the LLVM-14 compiler, achieving a 6.72% speedup on popular C++ projects.
- Published in the Proceedings of The International Symposium on Code Generation and Optimization (CGO) 2024.

Solving the Phase-Ordering Problem with Reinforcement Learning

- Develop a Reinforcement Learning model to address the compiler phase-ordering problem.
- Propose a novel pruning solution that exponentially expands the search space, enabling the Reinforcement Learning model to find optimal solutions in a reasonable time frame.
- The proposed solution generates programs that are 12% faster or 17.6% smaller than the programs produced by LLVM O3/Oz optimizations.
- Published in the Proceedings of The International Conference on Compiler Construction (CC) 2024.

Distributed Training Neural Network with Low-Precision

- Propose an algorithm to avoid overflow while using low-precision floating-point for gradients.
- Use 8-bit floating points to train ResNet50 on a large-scale distributed system.
- Published in the Proceedings of the International Conference, ISC High Performance 2021.
